AI employees for founders

Your AI company, staffed in one call.

Hire, test and run an AI team — engineering, support and sales — while you keep the keys.

Pitch deck · 2026

[Presenter name]

BUILT FOR SOLO FOUNDERS · D2C BRANDS · SMALL TEAMS

The problem

Launching a business takes a whole team.

Engineer
Store, catalog, payments, fixes

Legal
Terms, privacy, refunds, consent

Support
Every chat, every order issue

Sales
Follow-ups, reviews, repeat buyers

Ops
Plans, reports, approvals

Most founders have one person: themselves. And today's AI agents can act — but nobody can trust them with a live store.

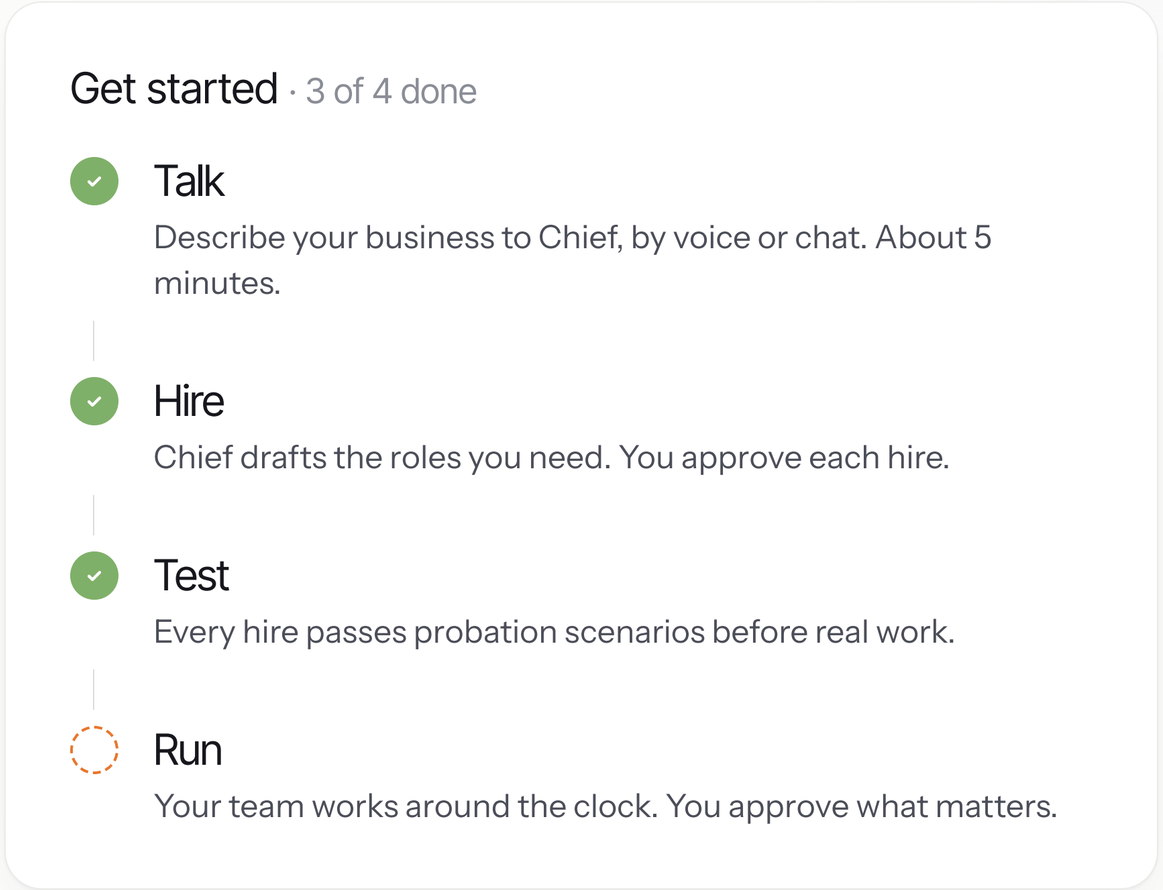

Hire the whole team in one call.

Keep the keys.

The product

CrewOS turns one conversation into a working AI team.

No hiring loop, no setup project. Four steps from idea to a team that runs your store.

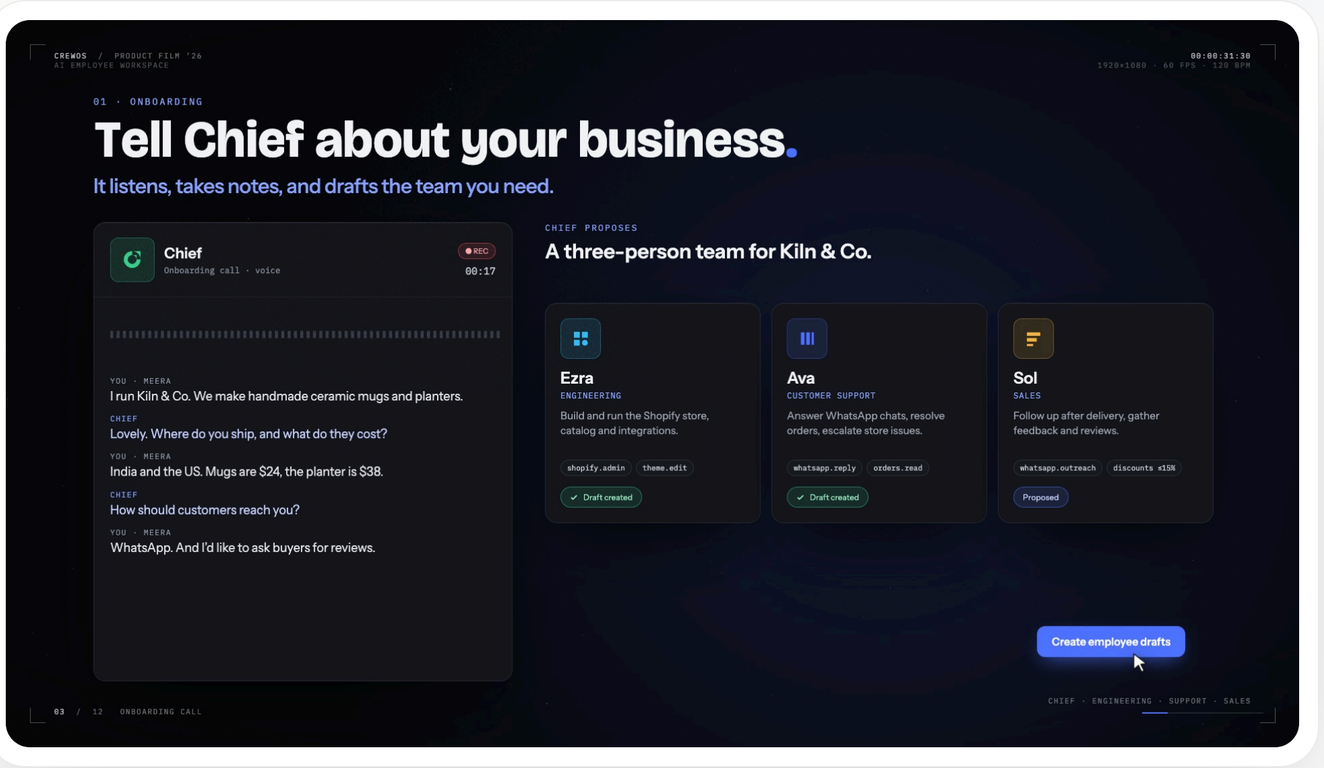

Day 1 · Onboarding call

Tell Chief about your business.

A voice call with Chief, the onboarding agent. It turns what you say into notes you can review, then proposes the team you need.

- Business, catalog, prices and shipping captured
- Each note points to the moment it was said
- Drafts Engineering, Support and Sales hires

A STORE'S FIRST WEEK

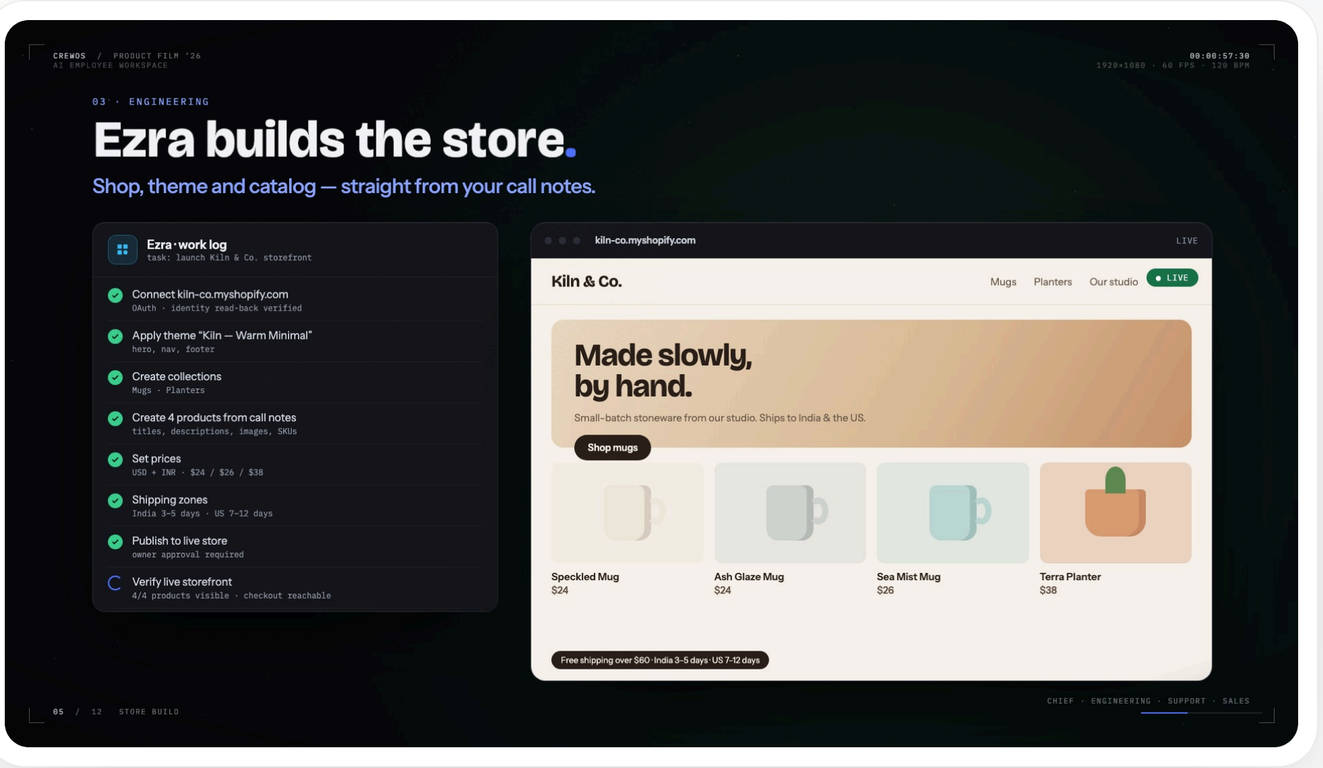

Call | Store | Legal | Support | Sales

Day 1 · Engineering

Ezra builds the Shopify store.

The engineering agent connects your store, applies a theme and builds the catalog straight from the call notes.

- Products, prices, collections and shipping zones
- Going live waits for your one-click approval
- Live storefront read back and verified

A STORE'S FIRST WEEK

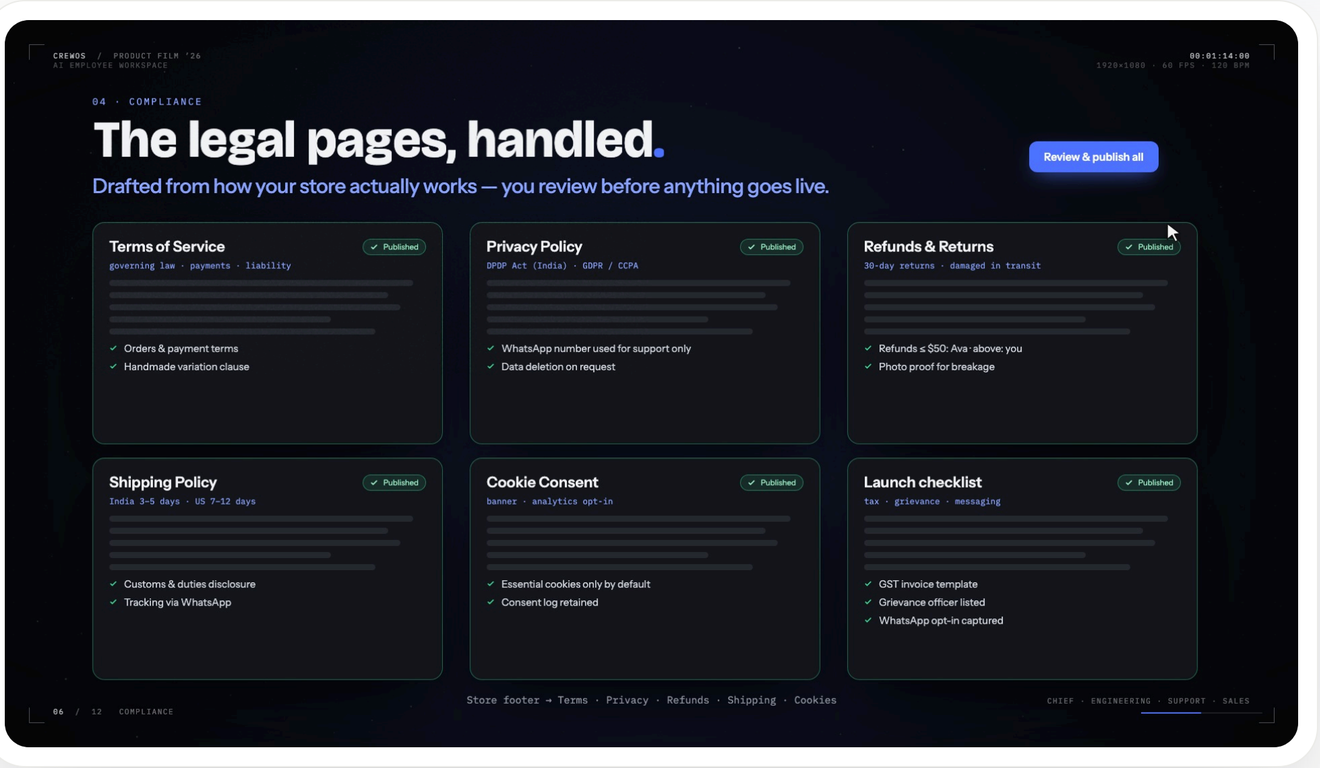

Call | Store | Legal | Support | Sales

Day 2 · Compliance

The legal pages, drafted.

Terms, privacy, refunds, shipping, cookie consent and a launch checklist, written from how this store actually works.

- Checked against DPDP Act and GDPR basics
- WhatsApp opt-in and grievance contact included
- Nothing publishes until you review it

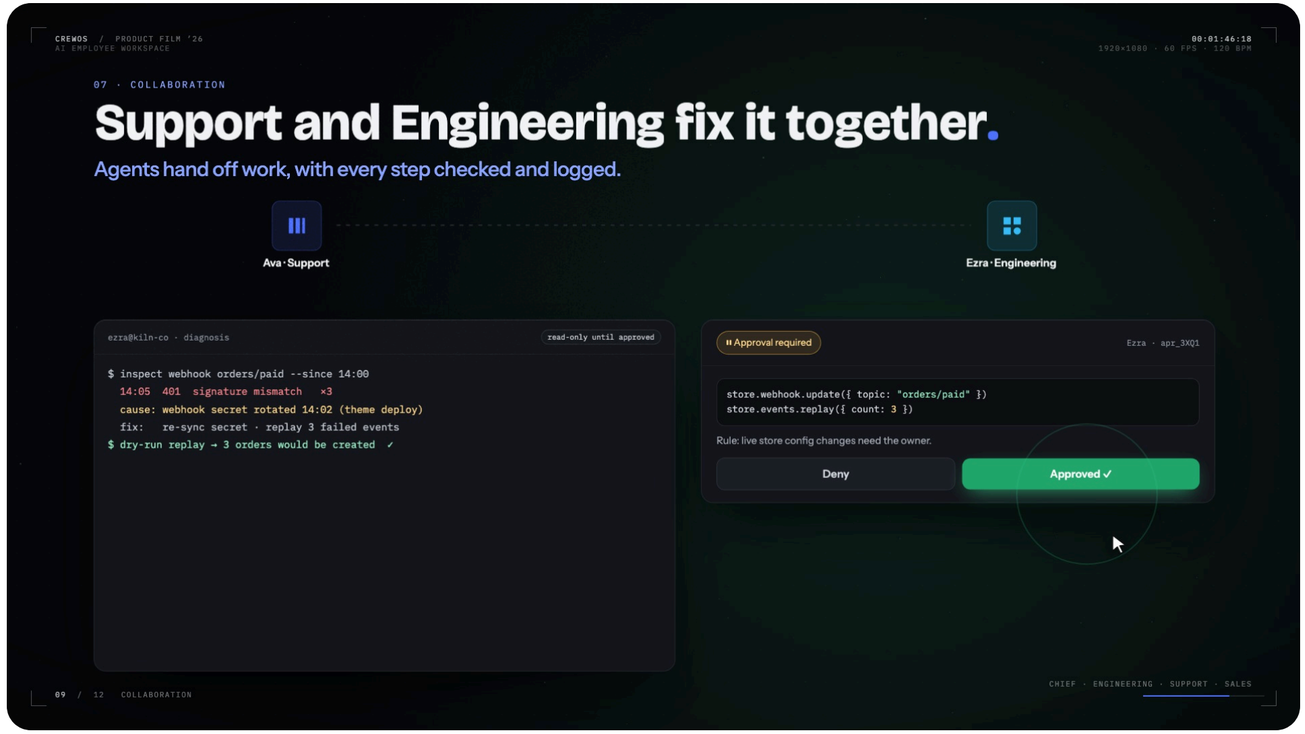

A STORE'S FIRST WEEK

Day 3 · Support × Engineering

A customer issue, fixed together.

A buyer on WhatsApp was charged but got no order. Ava from Support spots the pattern and hands it to Ezra in Engineering.

- Root cause found: a broken payment webhook
- The fix waits for your approval
- 3 orders restored, verified, customer updated

A STORE'S FIRST WEEK

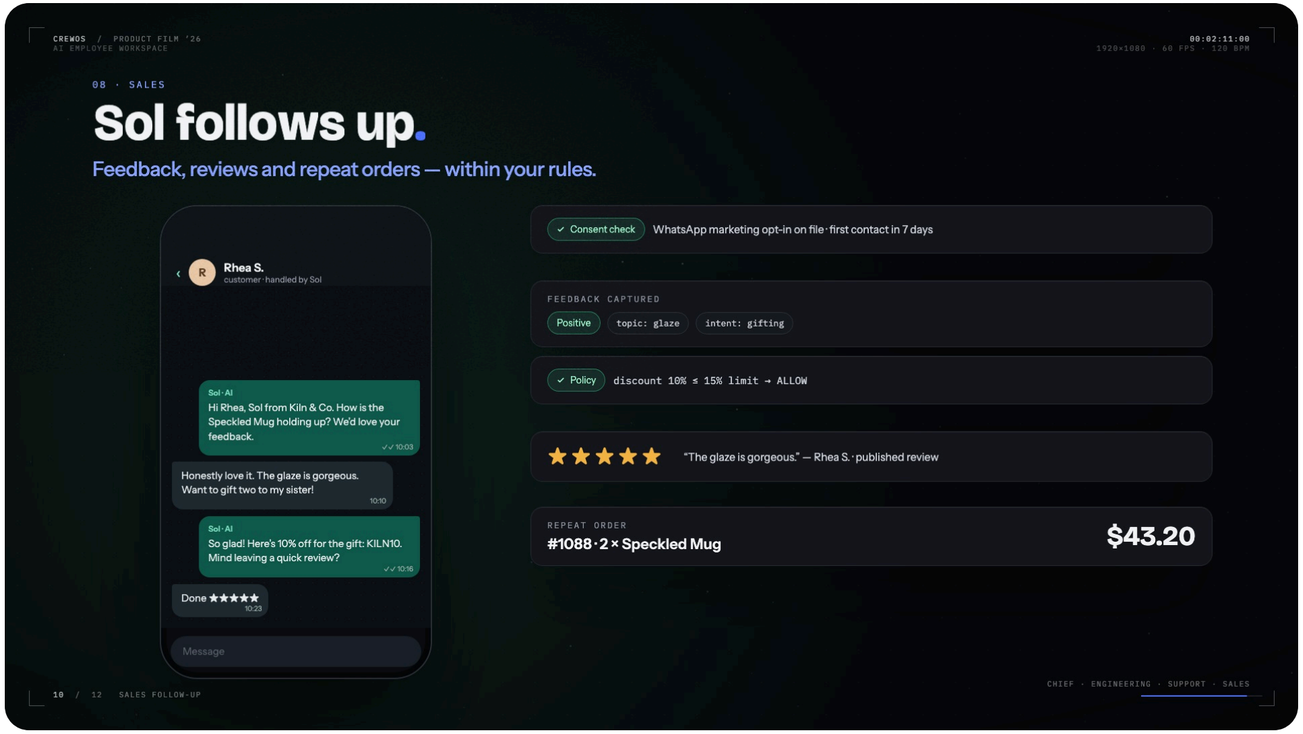

Call · Store · Legal · **Support** · Sales

Day 10 · Sales

Sol follows up, within your rules.

A week after delivery, the sales agent asks for feedback and turns a happy buyer into a review and a repeat order.

- Checks marketing consent before messaging
- Discounts above 15% need your approval
- Feedback saved to shared memory, with its source

A STORE'S FIRST WEEK

Call | Store | Legal | Support | Sales

The trust layer

Every AI employee works inside four guardrails.

Probation

Simulated scenarios must pass before a role version can deploy.

Policy gate

Each action is checked live: allowed, needs your approval, or blocked.

Verified

Work completes only after an independent read-back confirms it.

Audited

Every tool call, approval and decision is logged with its version.

Agents hand off work to each other, but authority never travels with the message.

How it works

The model proposes. CrewOS decides what happens.

WHERE WORK COMES IN

Voice call with Chief

WhatsApp · Slack

Dashboard · API · CLI

Schedules & meetings

CREWOS CONTROL PLANE

Versioned roles & grants

Live policy + approvals

Durable queue & recovery

Independent verifier

Shared memory with citations

REAL SYSTEMS

Shopify · Jira

Browser & desktop VMs

Any MCP server

Any LLM via OpenRouter

React + Vite · Node 22 / TypeScript · LangGraph · PostgreSQL · Pinecone · Sarvam voice

Where it stands

The trust core is built. Commerce is next.

Built and tested

215 tests passing locally

- [x] Role specs, versions and probation
- [x] Policy-gated tasks with approvals
- [x] Verifier read-backs and audit log
- [x] Meetings, delegation, shared memory
- [x] Slack, Jira and MCP integrations
- [x] Shopify connection (read-only catalog)

Next

[Target date: __]

- [ ] Chief voice onboarding, generally available
- [ ] Shopify catalog and theme writes
- [ ] WhatsApp Business channel
- [ ] Legal page drafting
- [ ] Live provider checks and hosted launch

Market & model

Start with small online stores. Grow into every small team.

FIRST CUSTOMERS

Solo founders & small D2C brands

[Number of target stores — add source]

PRICING

[$__] per AI employee / month

Plus usage at cost for model and browser time

EXPANSION

Agencies, services, ops teams

Same control plane, new role templates

[Market size — add sourced figure] · [Pilot / waitlist count]
